# profitability of breeding

an individual farmer has no influence on the price of milk  
- he can only

- increase production
- optimize costs
- reduce losses

Losses (missing)

# Losses as a result of calving complications

(based on the example of a herd of 150 dairy cows)

**Culling out a cow – loss EUR 3.000**

(high-yielding dairy cow )

**the loss of a calf stops herd growth**

**loss of income - cow brings income of EUR 4.000 during one lactation**

**costs of veterinary treatment**

**price of lost breeder time**

Up to 12% of animals in the herd are lost annually, as a result of calving complications  
(Warsaw University of Life Science - Szkoła Główna Gospodarstwa Wiejskiego)

**the cost of reproducing the herd**

**150 cows x 12% = 18 cows to culling out annually**

**18 x (-10 000 zł) = -180 000 zł**

# profits offered by CalfCam

**A breeder can  
gain up to  
EUR 20.000  
per year!\***

**\* example for a herd of 150 dairy cows - according to WULS-SGGW experts, thanks to care during childbirth, the system will reduce the culling of cows due to perinatal complications by at least 50%**

**improve profitability**

**limit your losses**

- less culling of cows and calves

**reduce costs**

- keeping an eye on calving takes a lot of time and is ineffective
- lower treatment costs

**increase production**

- maintain milk production
- grow your herd faster

# how CalfCam works

1. camera watch the cow
2. streaming footage to server

3. Artificial Intelligence analyze footage

4. system sends a notification about the upcoming calving

detects calving  
before delivery  
up to 30 minutes

# CalfCam - app

**iOS or Android**

- **mobile**
- **computer**
- **TV**

**notification options:**

- **SMS notification**
- **call with message**
- **in-app notifications**

**24/7 live feed  
on mobile**

- **notification list**
- **recording archive**

# CalfCam – how it detects calving

we manually marked 50,000 photos so that AI can recognize a cow

we created an AI model analyzing the cow's movement

we taught AI to recognize movements indicating impending labor

**FP (false positives)** - just like people or other automatic systems, e.g. alarm or collision detection systems in a car, AI also makes mistakes sometimes

**maximum sensitivity gives 95% effectiveness**

**you can easily verify notifications by viewing the broadcast in the application**

# Prominity **AGRO**

**SafetyWatch**

**detects people in  
footage from  
camera and  
notifies about  
violations**

**CalfCam**

**notifies about  
upcoming  
calving based on  
footage from  
simple camera**

**Condition**

**informs about  
changes in the  
cow's condition  
based on camera  
images**

**Bacteria**

**recognizes the  
type of bacteria  
in milk using a  
simple  
microscope**

**MilkProfiler**

**assesses milk  
quality and  
technological  
suitability for  
products**

in preparation, availability spring 2025

# CalfCam – breeder benefits

**CalfCam sends a notification even 30 minutes before calving, giving you time to:**

**finish ongoing tasks**

**return to the barn**

**plan cow care**

**supervise employee**

**inexpensive hardware**

**simple cameras and router**

**AI in the barn**

**complex Artificial Intelligence models**

**welfare**

**no sensors or body applications  
- only cameras**

**carbon footprint**

**reducing losses decrease footprint of producing 1 liter of milk**

**profitability**

**reduce losses, medical expenses, and maintain milk production!**

# sample pricing

(promotional offer - valid until July 31, 2024)

- single farrowing pens      system adapted to all types of barns
- collective farrowing pens      any system of farrowing pens
- tie barns      also births at tie stations

**single farrowing pen**  
**1 camera, 1 cow**

hardware installation      1 599,00 EUR  
**annual subscription**      **1 199,00 EUR**  
or monthly payment      119,00 EUR

**collective pen**  
**2 cameras, up to 4 cows**

hardware installation      2 199,00 EUR  
**annual subscription**      **3 599,00 EUR**  
or monthly payment      239,00 EUR

Herd welfare, applied.
