Applications, Systems, and Services

SZKM - Utility Cost Management System	<p>A system designed for comprehensive financial analysis of companies in the areas of utility consumption, usage, and billing. It is adapted to serve production, commercial, and service companies operating in multiple locations.</p> <p>An ideal solution for controlling the costs of electricity, natural gas, water, central heating, and other utilities, such as fuel at gas stations.</p>
ABP - Applan Business Platform	<p>A central, comprehensive online system for selling and servicing insurance. It supports business processes related to product creation, distribution, and sales, as well as client acquisition, servicing, settlements, and retention.</p>
HostedSMS	<p>An application enabling single and bulk SMS messaging, with support for receiving replies.</p> <p>https://hostedsms.pl/pl/</p>
CASMS - SMS Alarm Center	<p>A system designed to inform residents about various events via SMS messages.</p> <p>https://www.centrumalarmowesms.pl/</p>
eczaspracy.pl	<p>A tool that supports managing employee work hours by project or task, with reference to budgeted costs.</p> <p>https://eczaspracy.pl/pl/</p>
HE - HostedExchange	<p>A professional and secure email solution for businesses, based on Microsoft Exchange, offering advanced functionalities.</p> <p>https://hostedexchange.pl/pl/</p>
HW - HostedWindows	<p>A professional hosting service for websites and web applications.</p> <p>https://hostedwindows.pl/pl/</p>
Building Inspections	<p>A newly launched system supporting the work of various types of controllers and service technicians. The system was created as a flexible platform and will be further developed for future applications such as mobile mechanics or mobile car washes. Planned instances include supporting local governments in managing municipal assets efficiently.</p>
Online Portal	<p>A social and informational platform that enables the creation of individual blogs, forums, business cards, directories, and mini-portals within one service.</p>

msTools Suite

FSM - File Share Manager	<p>A web application for managing Windows network shares (shared folders) in a “self-service” model within the client's infrastructure (permissions, quotas, statistics). Key features include:</p> <ul style="list-style-type: none"> ▪ Identifying unused resources ▪ easily determining resource ownership,
---------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<ul style="list-style-type: none"> ▪ verifying the current state of file usage on resources, ▪ delegating the management of network folders to relevant users, relieving IT departments, ▪ standardizing permissions for resource access.
DSM - Distribution list and Shared mailbox Manager	An application for managing Microsoft Exchange distribution lists and shared mailboxes in a "self-service" model. It reduces IT department workloads by delegating permissions and membership management to users.
SPM - SMS Password Manager	An application that automates unlocking domain accounts (Active Directory) and remote password resets by users, while managing external user access to company applications and resources.
LSM - Lock Screen Manager	A unique platform for managing content displayed on employee computers in large organizations. The system allows automatic updates to lock screen and wallpaper images across all computers in the organization.
SecureRecipients (MS Outlook Plugin)	A plugin for MS Outlook that verifies whether email recipients are authorized to receive the message, supporting GDPR compliance. Authorized recipients and recipient domains are retrieved from an SQL database. The plugin helps users validate recipients for sensitive data emails and includes an automatic email content validation mechanism (regex) to detect specific strings and alert users.

IT Services	
Development	Analysis, design, and development of custom applications and IT solutions tailored to client needs.
IT services	Support for implementation, maintenance, and migration of Microsoft solutions such as Exchange, Active Directory, SharePoint, and others.
